

LEADING CAUSES OF DEATH FOR AMERICAN WOMEN (2007)

Of the women who died in 2007, one in four women dies from heart disease. It's the #1 killer of women, regardless of race or ethnicity. It also strikes at younger ages than most people think, and the risk rises in middle age. Heart disease is preventable, by leading a healthy life-style, women can lower their risk of heart disease by as much as 82%.
